Dear Executive Recruiter:

I am in the process of seeking a programmer analyst position where I can use my skills in:

- **Programming in SAS, SQL and Brio** – provided data on medical services analyzing millions of patient visits.
- **Reporting** – created reports for all levels of hospital management.
- **Creating data sets** – designed and assembled data sets for a variety of management and research.
- **Interpreting data** – analyzed and interpreted data sets.
- **Hospital systems** – familiar with diagnostic related groups, ICD-9 codes, hospital service codes and other hospital-related diagnostic codes.
- **Supporting research** – interfaced with researchers on a daily basis.

If you are working on a client assignment requiring a thoroughly experienced programmer analyst, either part- or full-time, I would welcome hearing from you.

Sincerely,

Jack Jefferson
